
Wummy’s Pizza Sales Performance Dashboard

Project Overview

This project involved a comprehensive analysis of a pizza sales dataset to uncover revenue drivers, customer ordering behavior, and product performance trends. Using **Power BI**, I transformed raw sales data into a strategic tool designed to answer critical operational questions and optimize business growth.

Business Objectives

The analysis was structured to address three core strategic areas:

- **Revenue Drivers:** Identifying what factors contribute most to the bottom line.
- **Product Mix:** Determining which pizza categories and sizes are the most popular and profitable.
- **Customer Behavior:** Analyzing how ordering patterns impact the average revenue per order.
- **Key Performance Indicators (KPIs)**

The dashboard tracks several high-level metrics to gauge overall business health:

- **Total Revenue:** ₦817,860.
- **Total Quantity Sold:** 49.574K units.
- **Total Orders:** 21.350K.
- **Average Order Value:** 2.3 (Average pizzas per order).

Deep-Dive Insights

- **Category Performance:** The **Classic** category leads in total revenue, followed by Supreme and Chicken.
- **Top Sellers:** "The Thai Chicken Pizza" and "The Barbecue Chicken Pizza" are the highest revenue-generating products.
- **Size Preferences: Large (L)** pizzas significantly outperform other sizes (M, S, XL, XXL) in revenue contribution.
- **Monthly Trends:** Revenue shows distinct seasonality, with a notable peak in **July** and a secondary surge in **November**.
- **Operational Efficiency:** The "Chicken" category accounted for **40.62%** of total revenue in specific segments, highlighting a major area for targeted marketing.

Technical Implementation

- **Tools:** Power BI, DAX, and Interactive Filters.
- **Data Modeling:** Established relationships to allow for seamless drilling from monthly trends to specific pizza names.
- **Visualizations:** Utilized Treemaps for order distribution, Bar Charts for product ranking, and Area Charts for time-series revenue analysis.

Strategic Impact

This dashboard empowers stakeholders to:

- **Optimize Menu Pricing:** Adjust prices for high-volume, low-margin items.
- **Inventory Planning:** Improve stock management by aligning inventory with seasonal demand patterns (e.g., prepping for the July peak).
- **Targeted Promotions:** Focus marketing spend on high-margin products like the "Thai Chicken Pizza".
